

Nagios NRPE Event Handler

Appunti per Event Handler

in questo esempio prendiamo:

1) **server nagios che monitora servizio http su macchina remota**

2) **ubuntu server remoto con apache2 (2.4.7) con nrpe server**

Impostare quanto segue su ubuntu server http, nrpe (il server DA monitorare):

creare un semplice script del tipo:

```
#!/bin/sh\  
service apache2 stop\  
service apache2 start
```

salvarlo come `/etc/nagios/restart-http.sh`

impostare il comando:

```
##On Event- HTTP CRASH - Restart - nrpe event handler  
command[restart_httpd]=sh /etc/nagios/restart-http.sh
```

Dare i permessi all'utente "nagios" in sudoers:

```
nagios ALL=(ALL) NOPASSWD: /usr/lib/nagios/plugins/  
nagios ALL=(ALL) NOPASSWD: /usr/bin/service
```

Nagios Server:

Impostare il servizio come segue:

```
define service{  
  
    host_name                UbuntuFront  
    service_description      HTTPD  
    check_command             check_http  
    max_check_attempts       4  
    event_handler             restart-httpd!$SERVICESTATE$ $STATETYPE$  
$SERVICEATTEMPT$  
    use                       generic-service,nagiosgraph  
    notification_interval    0 ; set > 0 if you want to be  
renotified  
}
```

Impostare il comando:

```
define command{  
    command_name    restart-httpd
```

```
command_line sh /etc/nagios3/conf.d/event-command/restart-http.sh  
$SERVICESTATE$ $SERVICESTATETYPE$ $SERVICEATTEMPT$ $HOSTADDRESS$  
}
```

Ed ora lo script, da rendere poi eseguibile con `chmod +x restart-http.sh`

```
case "$1" in  
OK)  
    ;;  
WARNING)  
    ;;  
UNKNOWN)  
    ;;  
CRITICAL)  
    case "$2" in  
SOFT)  
        case "$3" in  
3)  
            echo -n "Restarting HTTP service (3rd soft critical state)..."  
            /usr/lib/nagios/plugins/check_nrpe -H $4 -c restart_httpd  
            ;;  
        esac  
        ;;  
HARD)  
        case "$3" in  
4)  
            echo -n "Restarting HTTP service..."  
            /usr/lib/nagios/plugins/check_nrpe -H $4 -c restart_httpd  
            ;;  
        esac  
        ;;  
    esac  
    ;;  
esac  
;;  
esac  
exit 0
```

FINE
